HIPAA Privacy and Security eLearning from Elsevier

The HIPAA Privacy and Security rules not only established national standards related to protected health information (PHI), they also set strenuous civil and criminal penalties for non-conformance. Given the importance of compliance with these requirements, it is critical that relevant staff be trained to effectively fulfill their specific roles in assuring ongoing adherence.

To help provider organizations deliver this essential training, Elsevier offers the HCPro HIPAA Privacy and Security eLearning Library.™

This coursework explains pertinent HIPAA information by job role, including information on the HITECH Act; patient rights, confidentiality, and privacy; disclosure of PHI and protection of information; identity theft; and patient authorizations.

Courses are:

- HIPAA Privacy and Security: Business Associates
- HIPAA Privacy and Security: Coders, Billers and the HIM Staff*
- HIPAA Privacy and Security: Executive, Administrative and Corporate Staff
- HIPAA Privacy and Security: Nurses and Clinical Staff
- HIPAA Privacy and Security: Nutrition, Environmental Services and Volunteer Staff
- HIPAA Privacy and Security: Physicians
- HIPAA Privacy and Security: Registration and Front Office Staff

Fully updated to reflect provisions set forth in the HIPAA Omnibus Rule enforceable on September 23, 2013, the Library enables learners to:

- Describe how the HITECH Act affects covered entities and business associates

- Summarize how to protect patient privacy

- Explain patient rights for accessing, amending and updating their medical information

- Determine whether disclosures of PHI are acceptable

- Protect confidential health information by following proper security procedures

- Create effective passwords to protect electronic information

- • Identify which information is protected by HIPAA

- Prevent identity theft by recognizing red flags as required by the Red Flags Rule

The Library consists of six courses and six refresher courses for annual reinforcement, and all coursework is designed to maintain interest and maximize learning and retention.

- Testing, remediation and case studies provide feedback on whether learners are applying policies and regulations correctly.

- "Test Your Knowledge" exercises check learner understanding at every step.

- Role-specific case scenarios apply regulations to real-life settings, ask learners how a situation should be handled and then provide the appropriate response.

- Video-based scenarios show the wrong way and the right way to handle a situation, increasing student engagement.

- New design and audio narration offers different ways to navigate the course, so students proceed through interaction, not simple reading.

- A certificate of completion documents that employees successfully finished training.

Significantly, coursework meets the needs of a variety of learning styles, including visual, auditory and kinesthetic learners, and users can study at their pace and location. It's the best way available to help assure the best in overall HIPPA compliance.

Note: Credits available only for this lesson (coders, billers and HIM staff). Accreditation Statements: This program has been approved for three Continuing Education Units for use in fulfilling the continuing education requirements of the American Health Information Management Association (AHIMA). This program has prior approval of AAPC for 1 Continuing Education Unit. Granting of this approval in no way constitutes AAPC endorsement of the program, content or the program sponsor.
